

# nebotracker Installation Guide

Installing the Nebo Tracker is a quick and easy process. If you're happy connecting a low voltage DC device, you probably won't need to call on a marine electrician.

**1** Connect the battery

**2** Seal the lid

**3** Connect the power

Here's a bit more detail:

## 1. SIM Card

Your Nebo Tracker should come with a SIM card already in place. If it isn't, place the card in the SIM holder as shown (A), and slide the SIM cover to lock it in place.

## 2. Battery

Connect the battery by plugging the lead B into socket C. It only fits one way! You should see a red LED start to flash, provided the battery still has charge.

## 3. Seal the Lid

In order for the unit to be waterproof, you need to carefully seal the lid.

- Make sure the seal is lying flat in the main housing, without any visible dust or dirt
- Put the lid in place, making sure the battery cable won't be pinched
- Hand tighten the supplied screws uniformly
- If needed, tighten the gland around the external black cable

## 4. Connect to Power

Your Nebo Tracker needs to be connected to a DC power source of between 8 and 36 volts.

Connect the **RED** wire to the power source (+)

Connect the **BLACK** wire to ground (-)

*Ignore all the other wires in the cable!*

## 5. Mount the Device

Your Nebo Tracker should provide excellent performance when mounted inside lockers or inside a dashboard, but optimally give it a clear 180° view of the sky and the GPS satellites.

**Before you mount the tracker, take note of the 6-digit Serial Number on the back.**

## 6. Register your device in Nebo

So Nebo knows which tracker your boat is using, you need to register the tracker in Nebo app. (*If you haven't already, download Nebo and register your boat.*)

Open Nebo and tap **Other > Profile > My Boats**, and tap your boat's name.

Scroll to the bottom and tap **Configure Tracker**.

Enter the Tracker Serial Number and tap **Save**.

**That's it. See you on the water!**
